

HOW'S IT DONE?

ROTARY AIRLOCK LLC

DROP-IN REPLACEMENT
ETHANOL

First, we will gather 5 pieces of **information** to ensure we provide an accurate conversion.

This **info** includes the following:

Valve Make End RPM **or**
Bulk Density of Product & Desired Throughput

Valve Model Any additional changes
(sealing solution upgrade, bearing changes, etc...)

Valve Size

This info is then given to the engineering team who in turn provide a **Drop-In Replacement** with the appropriate **Ethanol configuration**.

This Drop-In Replacement is a **guaranteed** seamless fit, and with the **Ethanol Package's** strength and durability it is set to achieve more than you could ask for.

The **Drop-In Replacement** with its Ethanol Package, adaptations, and configurations is then verified to meet customer **satisfaction** with a dimensional drawing.

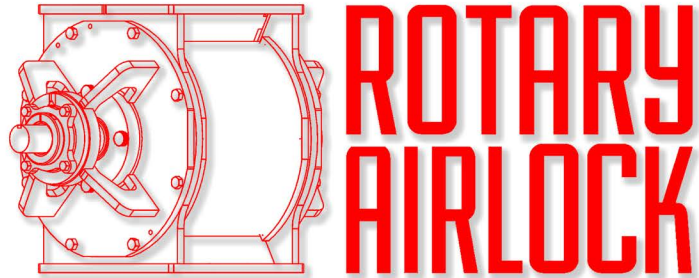

Upon *approval*, we begin right away and set to work.

7

The expected *turn-around* time on such a project will be **seven** weeks.
