

HOW'S IT DONE?

ROTARY AIRLOCK LLC

ETHANOL
CONVERSION

First, we will gather 5 pieces of **information** to ensure we provide an accurate conversion.

This **info** includes the following:

Valve Make End RPM **or**
Bulk Density of Product & Desired Throughput

Valve Model Any additional changes
(sealing solution upgrade, bearing changes, etc...)

Valve Size

This info is then given to the **engineering team** who in turn evaluate and suggest the appropriate modifications needed to achieve an **Ethanol** configuration.

A new **rotor**, with custom engineered **shafting**, and a newly configured **endcap** will be designed.

This guarantees a seamless fit with your valve with the **Ethanol Package's** durability and strength.

These adaptations and configurations are then verified to meet customer **satisfaction** with a dimensional drawing.

Upon **approval**, we pick up your airlock *absolutely free*, bring it in, and set right to work.

5

The expected *turn-around* time on such a project will be **five-six** weeks.

Discover YOUR airlock solution today.
